

TERRAPODS

Bio-design makerspace, creative esidency, & agroecology farm supporting nakers & growers.

RECYCLE LEBANON ریسایکل لیبانون

ECOSOUK

The first zero-waste shop in the WANA Region. Tackling conscious consumption and production with access to local, traditional, refillable, unpackaged and toxic-free products.

REGENERATE HUB

A circular economy platform to strengthen nature-based solutions.

a system change to re-psyc'le our mindset & drive action.

DIVE INTO ACTION

It Starts With You[th].

Empowerment programme with zero waste clean ups, balaplastic transitions, food waste events and carbon exchange native planting initiatives and advocacy. The waste crisis was the last [plastic] straw in a crippling state where water, electricity, air quality, and basic rights dance in complacent corruption.

Contributing to the reduction of pollution, enriching soil, restoring watersheds, climate action and the slow unlearning of our roles in extraction. We drive system change, empowering communities with tools and acces to become agents of equitable & just transformation.

Access System Change

Regenerate Hub is a circular economy platform to access data and visualise nature-based solutions. It engages users to consider the flow, impact, and value of resources across sectors [e.g. human, waste, energy, water, earth] how systems can be improved, and who is working to create alternatives on

the ground to drive action.

7,000 data points mapped 1 published journal on circular economy

It Starts With You[th]

We pioneered zero-waste sorting & recycling clean-ups at the peak of the waste crisis. Our most memorable moment, the #BalaPlastic installation with GreenPeace & Mashrou3Leila, their final concert!

CostaBrava GreenFilm Guide 16,000 plastic-free meals 200 zero-waste clean ups

Consume Consciously

Redesign your story with waste at our EcoSouk, the WANA's first circular hub packed with over 150 producers and change makers hosting refill bar, toxic free, package free, plastic free & re-use products and services. Built on dreams for system change, from production to consumption.

150 local producers 7,000 plastic bags diverted 350 free-trees distributed

Cigarette Stand-Up Paddle Board

We created the world's first cigarette filter stand up paddle board for in-sea clean-ups in collaboration with AUB Neighborhood Initiative and Tobacco Free AUB.

It was crafted by self taught shapper Paul Abbas from 12,000 cigarette filters collected in 50 receptacles designed by Adrien Muller durring our design competition.

We then partnered with artists Charbel Samuel Aoun in an eco-design course "A Sea of Solutions" to explore design transformation.

1,000,000 cigarette filters collected 45 curated artists exhibited Film4Climate Award at COP22

Sunday Thoughts #Film4Climate

TerraPods a bio-design makerspace, arts residency & agroecology farm.

We are growing a biodiverse food forest, medicine and dye garden, alongside a community kitchen with mouneh production from the farmstead community. supporting local livelihoods, R&D innovation from bio-materials and access to market in our EcoSouk shop.

MAKERSPACE, RESIDENCY & AGROECOLOGY

Hear the call of transformation

Tending to a food forest, medicine and dye garden, with roaming flocks a graze, Explore our experimental bio-design makerspace & creative residency.

Dehydrating skins, distillery and fruiting spores beyond our mold, Sculpting re-use schemes, re-fillables and that yet to be seen.

Embracing artists, scientists and the boundless at play under a ray of practice, Observing our paths in performance, installation, and sound in the silence.

Fostering income generation to grow, shape and sell bio-alternatives at our EcoSouk, a circular-living marketplace, re-stocking the shelves of self-sufficiency.

Design Out Waste

TerraPods serves as a R&D learning hub for community members passionate about ecology, providing training opportunities and a space for experimentation in agroecology and bio-design, leading to scalable regenerative practices and tools.

Our 3-tier approach combining agroecology, bio design and arts residency challenges the traditional extractive and unsustainable models of industry and agriculture, breaking down barriers between communities and increasing cross-sectoral understanding and collaboration.

We are modeling a closed-loop ecosystem, using resources and materials grown on the land to foster diverse perspectives and skills in an imaginative and holistic manner to address ecology and social action.

Consumption to Production

The TerraPods "grow, make and sell" model utilises the waste of one sector to create bio-compostable product of another. Terrapods creators and our in-house bio-based productions are then sold in our EcoSouk, connecting makers and consumers, promoting sustainable consumption.

Expanding the EcoSouk with a rural shop in the village of Baskinta, at TerraPods and online, our 3 points of purchase will increase access and provide a platform for local makers to sell their products, leading to job opportunities and income generation.

The community of conscious consumers will be able to find a wide range of zero-waste and sustainable products, helping them to reduce their environmental impact and increase access to alternatives.
